■ GitHub Workflow Cheatsheet

1. Clone the repo (first time only):
```
git clone <repo-url>
cd <repo-folder>
```

2. Always update local main branch:
```
git checkout main
git pull origin main
```

3. Create a new branch for your task/feature:
```
git checkout -b feature/my-task
```

4. Do your code changes ■

5. Stage and commit changes:
```
git add .
git commit -m "Added my feature/task"
```

6. Push your branch to GitHub:
```
git push origin feature/my-task
```

7. On GitHub → Create a Pull Request (PR)
Compare: **feature/my-task → main**

■ After PR is merged: Repeat from Step 2 (pull latest main, then create new branch for next task).
